PC Classroom Management Software,  
Remote Control and Administration

## The main features:

**Remote Desktop:** control one or several user computers remotely with a keyboard and a mouse.

**Broadcast Desktop:** broadcast a picture from desktop of instructor's computer to several user computers at a time. Advanced technologies, used in Net Control 2, provides excellent performance, which does not depend on a number of computers in the network.

Easily prepare tutorials: record an image from your desktop in a movie and play it on user computers, add audio comments or record activity of User computer for further replay.

Share and distribute files with **File Manager** and **Send/Collect Work** tools.

Control access of your users to **Internet** - dynamically enable or block access to Internet or specified web-sites; including optional content filtering.

Turn computers off and on remotely in one click with **Shutdown Manager**.

Create quizzes, make polls, send and collect work from students in a click; create electronic tutorials with the Desktop Recorder tool; play multimedia content synchronously on several student computers at a time;

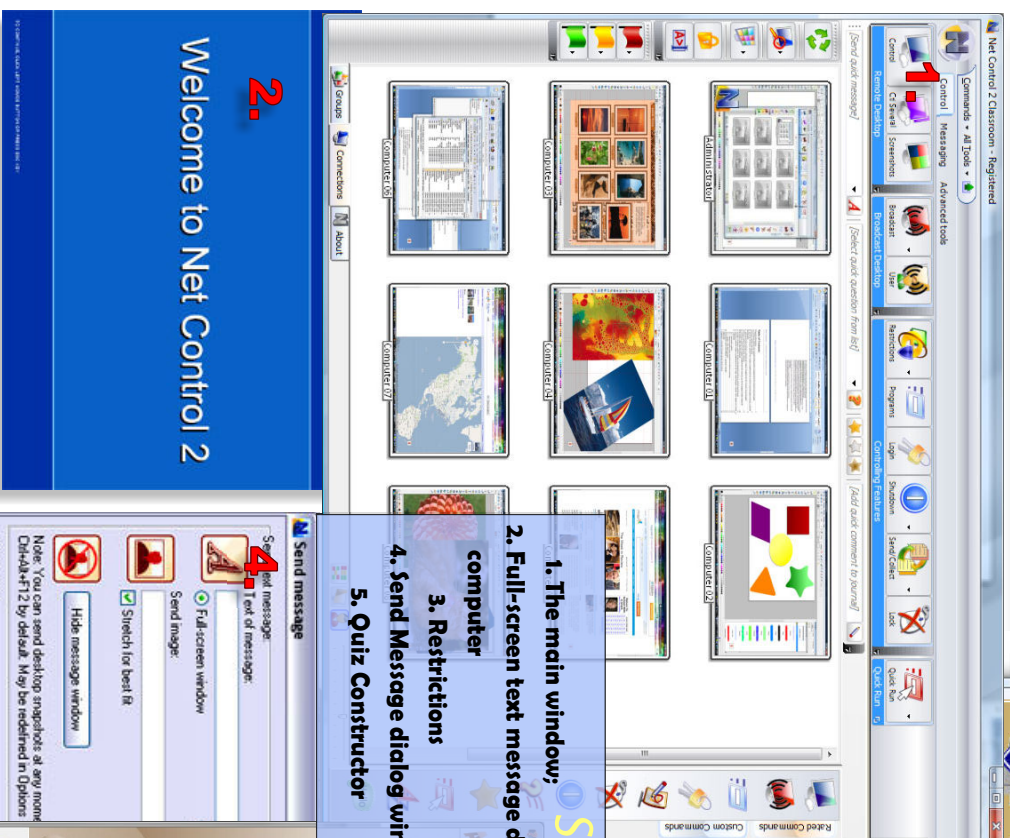

Send text messages, images and screenshots, communicate using chat tools; speak to students; give rewards and get help requests from students;

Lock and unlock computers to maintain student attention; restrict access to undesirable applications, system settings; disable printing and access to USB devices; apply these restrictions on a time basis; turn on and off computers remotely; manage files and applications.

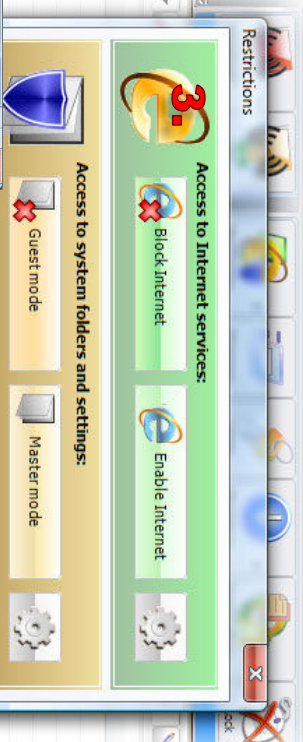

Full list of features is available on our web-site: <http://www.netcontrol2.com/nc2features.html>
